SUMMARY

Design Engineer with 4 years owning the full design to production using React, Next.js, and TypeScript applications. I like building motion-heavy, interactive experiences, reusable components and 3D web experiences like GSAP ScrollTrigger, Three.js, React Three Fiber, Framer Motion, After Effects and also blender. I care about the details: loading states, accessibility, performance. I've taken projects solo from design handoff to production, including a funded startup's investor-facing site and built an e-commerce platform

EDUCATION

Alpha College Arts and Science – Chennai, India **Aug 2017 - April 2020**

Bachelor of Science (Computer Science), First Class

PROFESSIONAL EXPERIENCE

Modulus Housing - Freelance **Nov 2025 – Feb 2026**

- Developed Next Js website for Modulus Housing, An IIT Madras startup that raised $7.83M (₹70Cr) Series A from Kalaari Capital & Hero
- Developed interactive India map with hover-state data visualization showing buildings built per state
- Created scroll triggered crane animation ("Build in 30 Days") using After Effects, Bodymovin, Lottie
- Built animated brand sections with Framer Motion — delivering a high-conversion experience for investors and B2B stakeholders
- Built a reusable component library of 20+ typed React components covering layout, forms and Set up CI/CD with GitHub Actions and Vercel automating preview deploys on every pull request. **(www.modulushousing.com)**

New Wings Solutions – B2B Cinema Equipment Platform - Freelance

- Designed and Built 3D models in Blender and a scroll-driven 3D brand website for a cinema equipment dealer using TypeScript, React, Next.js, Three.js and WebGL, with timed scroll, camera and logo animations.
- Adapted layouts and 3D quality for each device, kept mouse effects off touch screens, and supported reduced-motion settings.
- Kept animations smooth at 65 fps with Draco-compressed 3D models, staged 2K to 6K textures, on-demand rendering, and heavy GPU work only while the camera is still.
- Used Claude to build features, then reviewed the code, debugged problems and tested in a real browser, with Git checkpoints
- Set the visual direction: a dark cinema theme with editorial typography, and a set of SVG illustrations I drew for the product categories.

Manvasam (Startup) - B2B Coconut Export (Singapore) - Freelance **Apr 2026 – Jun 2026**

- Delivered premium Design and developed B2B coconut processing platform for a Singapore based client, handling both UI/UX design and full frontend development
- Accelerated development by 30% using Claude Code to build Next.js components and turn Figma designs into reusable, type-safe code.
- Delivered fully responsive design with SEO optimization and SVG animation for an international audience **(https://manvasam.vercel.app)**

CORE SKILLS

Languages

- TypeScript
- JavaScript (ES6+)
- HTML5
- CSS3

Frameworks

- React
- Next.js
- React Native
- Astro
- Node.js

Motion Design & UI

- Tailwind CSS
- Framer Motion
- NativeWind
- Three.js / R3F
- After Effects + Lottie
- Responsive Design
- Blender
- GSAP, ScrollTrigger

Static & Real-time

- Zustand
- Rest APIs
- Redux

Tooling & CMS

- Contentful
- GitHub Actions
- Vercel
- Claude Code
- Codex
- Webflow
- AI Integration

Gorcerry E-commerce Platform - Singapore

- Built a live, full-stack e-commerce platform with Next.js App Router, TypeScript, Tailwind CSS and Supabase, supporting a 939-product catalogue.
- Created a headless CMS so a non-technical owner can manage products, content and homepage sections without code.
- Implemented responsive shopping and checkout flows, Stripe payments, PayNow, customer/admin authentication and transactional email.
- Used Claude Code to accelerate iteration while independently reviewing security-critical and production code
- Created a responsive landing page using Webflow, collaborating with the SEO team to align the implementation with SEO requirements.

New Wings Solutions – Chennai, India - **Full Time (Startup)** **Oct 2022 - Sept 2025**

Web Developer

- Shipped 8+ client websites and deployed using React, Next.js, and TypeScript and React Native mobile app with Clerk authentication in under 3 weeks, packaging a production-ready APK for on-site distribution at a school expo
- Translated complex Figma prototypes into pixel-perfect Next.js layouts, optimizing Core Web Vitals, SSR and image optimization in Next.js and Built type-safe REST APIs using TypeScript (Next.js, Astro, Node.js), achieving 50-75% faster data fetch speeds.
- Modeled custom 3D objects in Blender and brought them into a Next.js scene using Three.js / React Three Fiber.
- Built scroll-driven storytelling with GSAP ScrollTrigger the 3D model reshapes and re-angles as the user scrolls, turning scroll position into an animation timeline.
- Set up Contentful as a headless CMS so the client's team could edit content without touching code.

PERSONAL LEARNING PROJECT **AI Frontend Engineering**

Sphere – Real-time Voice AI Interface

Next.js · TypeScript · WebSockets · Web Audio API · React Three Fiber · Node

- Explored WebSockets and Web Audio API to build a real-time voice interface
- Experimented with an audio-reactive 3D scene in React Three Fiber driven by live amplitude data

BEYOND CODE

- Multi-disciplinary delivery across web, animation, and video including After Effects/Premiere Pro post-production (subtitles, edits, final cut) for a corporate client
